

10" Lagoon pumps

Trailer and 3PH-mounted lagoon pumps

Features

Strong self-cleaning frame

10" (25 cm) discharge pipe

High-flow flapper valve

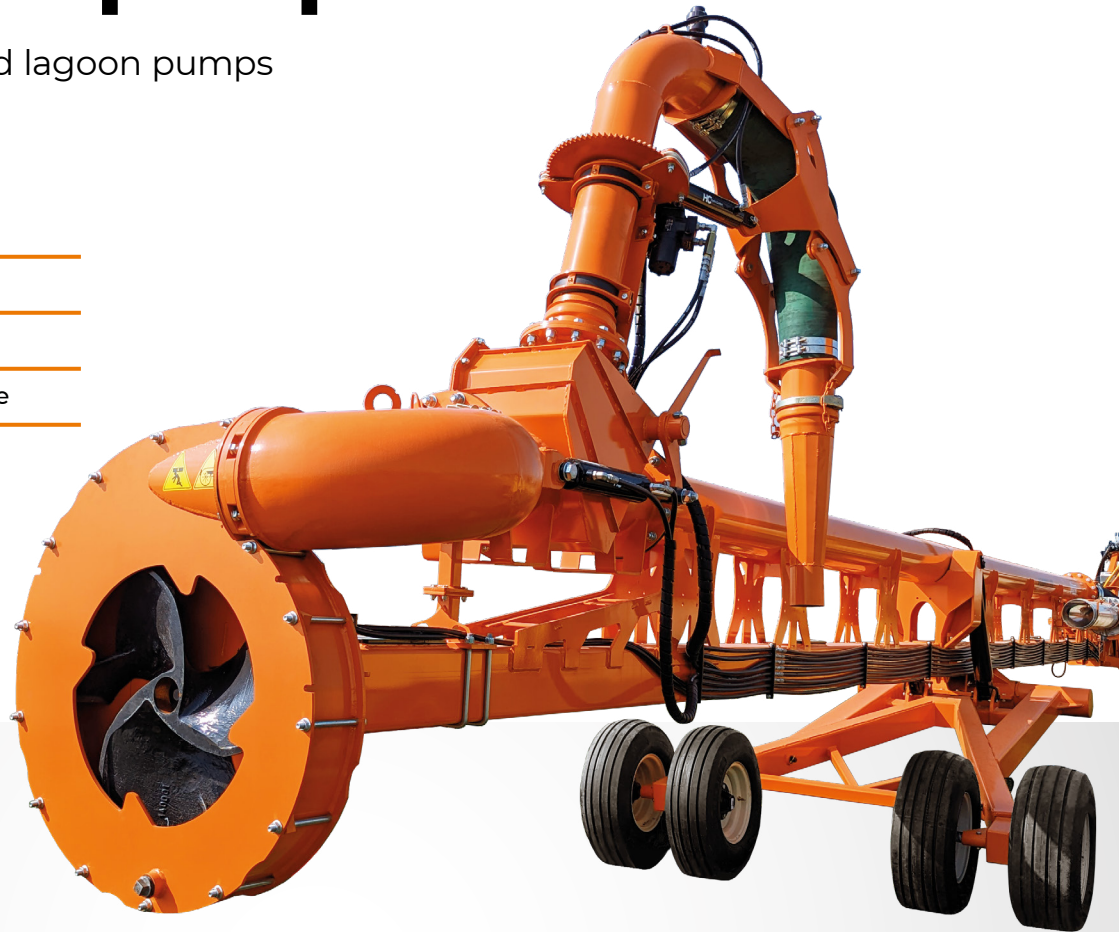

8" (20 cm) cannon / 5" (13 cm) nozzle

Multiple impeller choices

Models

// Trailer 42', 52', 62', 72'
(12.8, 15.8, 19, 22 m)

// 3PH mount 25' (7.6 m)

Pumpeller

Hybrid turbine

The propeller at the center of the turbine creates a powerful suction that pulls in tough solids and obliterates them at **up to 50 cuts per second**.

The integral impeller blades on the outer edge deliver fast load-out and high cannon pressure.

Winner of the American Society of Ag Engineers Outstanding Innovation Award.

Maxx-10

Built for sand

Extra heavy construction and special materials make Maxx-10 the ultimate sand machine. The cast Ni-Hard housing outlasts steel, cast iron or white iron.

The single 10" (25 cm) outlet operates at maximum efficiency, creating less turbulence and wear than multiported volute models.

Modular design to get exactly what you want.

Valmetal's unique **You-build-it system** let's you select each component to produce the perfect pump for your situation.

Trailer models

Choose our trailer models for sloped wall or vertical wall entry. They have excellent reach into the pit and add no weight load on tractor.

Wheel kits

- Single wheel
- Dual wheel
- High lift
- Telescopic
- Side-folding

3PH models

3PH mounted models are made for vertical wall entry only, with a maximum depth of 17' (5.3 m). More economical than trailer models, they are also very easy to maneuver.

Hydraulic controls

With the vast selection of models and options available, some pumps may only have a few hydraulic functions to operate while others may have many. Our hydraulic controls can be mixed & matched to give you the perfect setup for the way you work.

- Standard spool valves
- Electric spool valves
- Direct-to-tractor
- Wireless controls
- Electric splitter controls
