MAXTRAC DURA-TECH

High-performance
steerable tanker

VALMETAL

Dura-Tech hydraulic suspension

The **smooth hydraulic suspension** cushions shock loads while the **responsive steering system** really takes the load off your tractor during cornering.

Stability. Durability. Maneuverability.

4, 6 & 8 wheel
spreaders

Features

1/4" (6 mm) steel - complete body tank

Stainless steel tank OPTIONAL

Continuous welding eliminates rust seams

LED signal light kit

DOT reflective strips (sides and back)

32" (81 cm) square fill hatch

6" (15 cm) discharge pipe

Level indicator (front and rear)

4-3/8" (11 cm) 20,000 lb (9,072 kg) hubs and shafts

Industrial brakes on 4 or 6 wheels OPTIONAL

1/4" (6 mm) steel anti-surge baffles

Roof with non-slip walkway

Safety chain

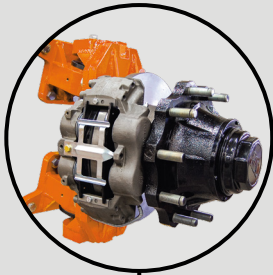

Fenders and mudguards OPTIONAL

Benefits

- ✓ Excellent maneuverability.
- ✓ Maximum performance and minimum maintenance downtime.
- ✓ Great stopping power for heavier loads.
- ✓ Reliable mechanical steering, regardless of speed.
- ✓ Powerful impeller with 21" (53 cm) hinged housing.
- ✓ Independent suspension up to 16" (41 cm) of travel.
- ✓ Independent trailer and replaceable tank.

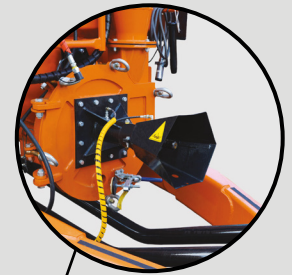

Great stopping power

- Massive brake calipers feature larger pads than the industry standard. The 100% hydraulic oil in the braking system thus eliminates the risk of contamination of the tractor hydraulic system. Automatic braking makes driving safer by reducing operating errors.

High volume impeller

- The Maxx-Trac spreader is equipped with a high-end impeller for the fastest unloading. Its oil-bath bearing chamber offers maximum reliability. Discharge system available in 6" or 8" (15 or 20 cm).

Modular construction

- Regular maintenance protects your investment. Each module is removable using standard on-farm tools. The suspension tables and the pivoting axle assembly have the advantage of being identical on each wheel.

Independent suspension system with ball-joint linkages

- With the Dura-Tech hydraulic suspension, the right and left axles of the Maxx-Trac work independently ensuring optimal load distribution across all wheels. Its 16" (41 cm) travel allows it to easily handle large obstacles.
